

ETA-SCAN Wellness System Offers Integral Prevention without Invasive Diagnostics

By Gina Mazza Hillier

As someone who reports frequently on complementary/alternative medicine (CAM), I've had the opportunity to research various well-established modalities that measure the human energy field (bio-field) in order to diagnose or treat illness. The Pittsburgh region is fortunate to have a wealth of practitioners of energy medicine—one of the five domains of CAM identified by the National Center for Complementary and Alternative Medicine (NCCAM)—who utilize many types of diagnostic tools. When I first heard about a product from Europe called the ETA-SCAN, my tendency was to group it into the rest of the radionics-based diagnostics and therapy systems available to consumers. What intrigued me about this particular device was the claim that it could assess, visualize and normalize the energetic flow of *all levels* of the human body—not just physical but mental, emotional, psychological and even etheric.

So I decided to pay a visit to Dr. Dan Wagner, who brought this technology to our area after discovering it in Canada. While about 3,000 ETA-SCAN practitioners work throughout Europe, the device is just now being introduced to Canada and the US. Dan continues to receive advanced training on the machine through his European colleagues, and the more he integrates it into his practice as a natural pharmacist (he is the owner of Nutri-farmacy in Gibsonia), the more he's amazed at the machine's sophistication in getting to the root of health-related issues. "Working with the ETA-SCAN has been career changing for me," he says. "This is probably going to be the rest of my career because the machine can tell you so much."

Based on the science of quantum mechanics, ETA-SCAN recognizes that every organ and cell in the body has a distinct wave frequency that can be measured; these frequencies are stored in the machine's memory as a graph. By viewing a computer screen that shows pictorial representations of the body's various organs, tissues and structural components, patients can see the energetic vitality

of each of these internal areas, as well as where energy blocks may be present. Results from a comprehensive scan—which takes about 45 minutes—are captured on a detailed report that is shared with the patient. From there, the practitioner works to assess the nature of the imbalance and determine therapeutic strategies to improve or eradicate it.

“The basic premise is that we got these organs from God that can probably last hundreds of years,” Dan comments. “About 80 percent of time, there’s nothing pathologically wrong with these organs—they just get overstressed.”

Dr. Dan invited me to observe as one of his patients (a woman in her 60s) is tested. As the machine scans, she asks questions and Dan explains what’s on the screen. “Yellow indicates high energy and optimal organ functioning,” he says, “and black indicates low energy or organs susceptible to illness of some kind.” Several moments later, the scan reveals that the energy of the patient’s gallbladder is predominantly black. “You’ve had your gallbladder removed, haven’t you?” he asks. “Yes,” she confirms. The session continues as such, with doctor and patient in thoughtful dialogue about various aspects of her physical health and overall well being.

Later that day, I connect by phone with another of Dan’s patients, Shannon Sutter of McCandless. For years, Shannon suffered from chronic hives. She’d been to a litany of allergists and dermatologists who told her, respectively, that she had allergies and dermatitis. “My nutritionist referred me to Dr. Dan, and he was the one who said it was something more serious than an allergy or skin condition,” Shannon recounts. “He tested me for a number of things and, as a last resort, told me about the ETA-SCAN. The machine showed up severely high levels of mercury in my blood and liver. What’s so amazing is that I’m a biology major at Penn State, and we had just studied this very thing in my toxicology class. It was weird to learn about this in class then see it demonstrated on myself!”

Wagner created a homeopathic remedy for mercury toxicity, which Shannon took daily. One month later, Wagner retested her on the machine. “When I was rescanned, my mercury level was pretty much nonexistent. But the real proof is that I haven’t had a recurrence of hives.”

My investigation wouldn’t have been complete without having the ETA-SCAN tested on myself (all in a day’s work). Dr. Dan obliges. I inform him about the

only health concern I have at this time—a very minor ailment that seems to be harbored in my GI tract, just below my left ribcage. I can only describe it by saying that it feels as though something is stuck there.

“It’s a lot like sleuthing, actually,” Dan says as the scan begins. “because I’m looking to find the thing that’s causing problems, and it could be more than one thing. What are some possibilities? Parasites, microorganisms, viruses, bacteria, fungi, unbalanced tissue, food intolerances, allergies, pollutants. Or it could be something psychological or emotional. In many cases, these conditions can be ‘inverted’ energetically to minimize the affliction. Ultimately, we’re trying to do is regenerate the organs.”

Sure enough, the report confirms that I’d contracted an undesirable bacteria in the past year, probably from tainted food or water. I think about time I’d spent in Mexico about a year prior—which correlates to when I first noticed the problem. Dan creates a homeopathic remedy for me, as well. To date, the “stuck” feeling seems to have lessened but it’s still there.

Another cool feature of the ETA-SCAN is that the practitioner can input any drug, vitamin, supplement or even a verbal affirmation into the system to see if it increases or decreases energetic flow. The accuracy of the machine exceeds the use of simple muscle testing, or kinesiology, Dan notes. “The problem I see with kinesiology is that there’s bias in the practitioner and in the patient. The machine does away with that. What’s more, with kinesiology, you can test 15 products on a patient and they may all test positive—that doesn’t mean that the patient needs 15 products. The machine quantifies each product by percentages of effectiveness so the patient is taking only what they need to get the best outcome.”

Thus far, I’d only come across non-life-threatening conditions in my first-hand research, so I want to know, do serious illnesses and disease show up on the report? “Yes, any health condition such as osteoarthritis, autoimmune diseases or cancer will show up,” Dan confirms. “Now, I’m not trying to cure cancer; if I said that, the FDA would be in here tomorrow! What I’m doing is energetically improving the organ [where the unhealthy condition resides]. It can be done. Some health issues—like irritable bowel—are just a harboring of stress on the organ. Get rid of the stress and the organ improves. Logic would dictate that if the organ is functioning better, it’s going to fight off cancer and other diseases to

begin with. And you can't cure osteoporosis, but we can test to see what's the best calcium and magnesium for you, which will improve the bone function. So, you're not going to 'cure' anyone necessarily with this machine. But is it a diagnostic tool? Of course it is. Is it a way to heal people? Of course it is. And I humbly say that I have been extremely fortunate to have made connections with qualified holistic practitioners in many countries that have opened doors for me into advanced levels of healing—including working with this remarkable diagnostic tool."

Which leads me to believe, more than ever, that the future of energy medicine is happening right now, right here in Pittsburgh.
